<sup>2</sup>EN 1706:2020 Aluminium and aluminium alloys – Castings – Chemical composition and mechanical properties

3lt cannot be assumed that the given values can be reached throughout the casting since mechanical properties strongly depend on the solidification rate, the heat treatment and the soundness of the casting. Therefore, the values and the position of the area where those values can be achieved shall be agreed between supplier and customer. 4 The heat treatment has to be defined according to the type of casting produced.

Any dissemination, copy or reproduction of this document, even if only for extract, is prohibited.

The physical and mechanical properties shown in this data sheet have a mere informative purpose since they are detected on sample cast separately in specific cooling conditions. No liability is accepted for decisions based on the indicated physical and mechanical properties and no guarantee is given for the physical and mechanical properties indicated, as they depend on the specific conditions of casting of the cast pieces.
